

WELCOME TO THE WORLD OF SMART HOMES

“LUXURY IS ATTENTION TO
DETAIL, ORIGINALITY, AND
EXCLUSIVITY.”

ABOUT US

We are a decade old professionally managed organization offering Innovative, Reliable and Bespoke Lifestyle Green Solutions in the Residential and Corporate interiors domain Pan India.

We have successfully executed 600+ projects, over 25 cities with a customer referral ratio around 40%.

In the Era of AI, The technology adapts to you, not the other way around.

We believe AI should feel invisible, reliable, and human-centric. Our role is to design systems that enhance comfort, security, and well-being — without overwhelming you with technology.

The future of smart homes lies in a collaborative ecosystem where AI, connected devices, and human needs work in harmony.

Central Vacuums

**IN INDIA
SINCE 2014...
500+ PROJECTS...
EXECUTED SUCCESSFULLY...**

40
**YEARS OF
DEVELOPMENT**

CENTRAL VACCUME SYSTEMS

Central Vacuum Systems are a state of the art, convenient means of keeping your home clean. These systems are installed in homes by means of a network of PVC ducting. Vacuum inlet valves are strategically located around the home which are connected to the central vacuum unit.

The main unit positioned in the garage area, utility room or dry area.

Central Vacuum Systems are efficient in that both solids and liquids are picked up efficiently making your cleaning process a lot easier. Wet machines drain out dirty liquids, so that there is no need for human contact.

They're also proven to be hygienic, as they can pick up particles up to 2 microns in size thus keeping rooms bacteria and dust free.

FRESH AIR SYSTEMS - *Demand Controlled Central Ventilation*

FRESH AIR SYSTEMS

ENERGY RECOVERY VENTILATOR

One-Stop EPO IAQ Solution

- Energy Saving
- Air Purification
- Thermal Comfort

Type 1

Energy recovery ventilator (ERV)

- This energy-efficient ventilation method minimises the energy lost in air conditioning.

Simultaneously supplying and exhausting air on a mechanical basis allows heat and humidity to be exchanged, reducing air conditioning costs.

Counter-flow heat exchange element

Supply air filter minimises intrusion of mould spores, pollen, etc.

The outside air duct features a supply air filter that minimises the intrusion of a wide variety of air contaminants, including mould spores and pollen.

One building, one system

A single ERV system can manage the ventilation for every room of any building type.

FRESH AIR SYSTEMS

ERV As A Modern Solution

Among various ways of achieving ventilation, the utilization of Energy Recovery Ventilator (ERV) is a modern and effective solution. In different aspects, ERV is able to bring more benefits, comparing to the traditional ventilation method.

- Achieve Air Purification
- Increase Comfort Level
- Increase Energy Saving

Light must **DISPLAY.** Not **DISTURB.**

Light flares can be annoying.
Endo GLARE-LESS Downlight has
Precise Inner Reflector Controls to
distribute well-formed light.

NETWORK SYSTEMS

STRETCH CEILINGS

A Stretch Ceiling is a suspended ceiling system consisting of two basic components – a perimeter track and lightweight fabric membrane which stretches and clips into the track. In addition to ceilings the system can be used for wall coverings, light diffusers, floating panels, exhibitions and creative shapes.

RETRACTABLE ROOFING SYSTEMS

A retractable roof is a roof system designed to roll back the roof of a structure so that the interior of the facility is open to the outdoors. Retractable roofs are sometimes referred to as operable roofs or retractable skylights. The term operable skylight, while quite similar, refers to a skylight that opens on a hinge, rather than on a track.

SOLAR POWER SYSTEMS

**Solar energy systems
and supplying renewable
energy products such as:**

- Solar Photovoltaic
modules**
- Solar Thermal (Flat
plate & Evacuated Tube
Collector)**
- Grid-connected Solar
power plants**
- Stand-alone power
stations**
- Solar water geyser
systems**
- Solar lighting systems.**
