

Smart Home Cost Guide

Home automation in India typically costs anywhere from ₹1.5 lakh for a smart apartment to ₹1 crore+ for a fully-wired luxury villa. What you pay depends on four things: how many rooms, which brands, how deep the automation goes, and whether it's a new build or a retrofit.

1. What you'll pay — by quality tier

Tier	Brands	Apartment (2–3 BHK)	Villa / large home
Standard Quality Wi-Fi	Smart Wi-Fi, Tata, Havells	₹1.5 – 4 L	₹4 – 10 L
Premium Wired	KNX, Lutron, Control4	₹6 – 12 L	₹12 – 25 L
Luxury Reference	Crestron, custom	₹15 L+	₹30 L – ₹1 Cr+

2. Real sample budgets

Home	Scope	Tier	Estimate
2–3 BHK apartment	Lighting + climate + security	Standard	₹1.4 – 1.8 L
4 BHK villa	Lighting, climate, curtains, security	Premium	₹12 – 16 L
Large villa	Whole-home + home theater	Luxury	₹33 – 42 L

3. Ballpark by feature

Feature	Standard	Premium	Luxury
Smart lighting (per room)	₹15,000	₹45,000	₹1.1 L
Climate control (per room)	₹6,000	₹22,000	₹45,000
Motorized curtains (per room)	₹14,000	₹50,000	₹85,000
Security & CCTV (home)	₹55,000	₹1.5 L	₹3 L
Multi-room audio (per room)	₹20,000	₹75,000	₹1.3 L
Home theater (room)	₹2 L	₹3.5 L	₹8 L
Voice & control	₹20,000	₹90,000	₹2 L

4. What drives the cost

- **Wired vs wireless** — wired (KNX/Crestron) costs more upfront but is rock-solid and best done at construction stage.
- **Number of rooms & points** — more switch points, keypads and zones scale the price.
- **Brand tier** — the single biggest lever (a Crestron keypad can be 5× a Wi-Fi switch).
- **New build vs retrofit** — pre-wiring during construction avoids costly chasing of walls later.

Tip: Building or renovating? Get the wiring planned **before** the electrical work — it's far cheaper than retrofitting, and it's the only way to do true wired automation.
